

Case Study

Multicentric Clinical Trial with the Center for Urologic Research at Mannheim University

The Medical Faculty Mannheim of the University of Heidelberg partnered with Climeddo to conduct a multicenter trial on urothelial cancer. This resulted in overall **time savings of close to 50%**, with **80% faster onboarding**. There was also **zero data re-entry**, which led to a significant reduction in time spent on data management.

“Without Climeddo, it simply wouldn’t have been possible to conduct our clinical trial in the given time.”

Prof. Dr. Philipp Erben
Head of Urologic Research Mannheim

Challenge

- **Multicentric** urologic oncology study involving **7 parties across 5 sites**
- **Quick ramp-up needed** and little time for otherwise usual preparatory administration
- **Divergent methods of data capture** as every site operated different systems
- **No common IT infrastructure** for secure and efficient data exchange

Approach

- Creation of a **multicentric clinical trial** in Climedo with extensive customization options
- **Intuitive and quick set-up of eCRFs** directly by the PI in Climedo
- Easy **onboarding of all stakeholders**, allowing for prompt start and simultaneous work
- Structured and **unified data capture** across all participating sites
- **Secure, real-time data exchange** via Climedo platform between parties

“Climedo enabled us to work on value-adding tasks much faster. Annoyances like extensive data cleansing and unification have become a thing of the past!”

Dr. Ralph Wirtz

CEO Stratifyer Molecular Pathology GmbH, Molecular Biology PhD

Impact

- Close to **50% overall time savings** compared to similar trials
- **80% faster ramp-up** time of 30 days from study design to enrollment of first patients
- Significant reduction in time spent on data cleansing and preparatory data processing, resulting in **faster insight generation and publications**
- **Zero data re-entry** between systems
- **Reusable structures** due the software’s learning ability for future trials
